Computer Security Services

Tectonic Energy Consulting Inc. Security division is providing a premium security service – We offer a very wide range of services including *forensic data recovery, Computer Forensics, network security testing & Incident Response as well as Wireless Security & Audits*. We use only state of the art computer equipment and the most technically advanced data recovery software currently available. Our use of superior computer equipment and techniques allows us to unobtrusively monitor, detect, and/or recover data from suspect computers. This allows us to accurately document the true nature and extent of the activities while maintaining the data's integrity for further use in Criminal and Civil legal applications.

Our computer forensic investigations are conducted in a forensically sound manner, thus preserving the integrity associated with a particular piece of electronic evidence. As licensed private detectives, we are better qualified to find evidence than the average office IT specialist or other IT companies because we already have the investigative knowledge, training and mindset. We have a multitude of court-recognized software programs and tools to employ... along with our vast experience in both the technological aspects and generally accepted investigation practices.

From something as simple as a network security audit to a full penetration test and everything in between, Computer Evidence Recovery has the technology, skills, and agents to assist you with any issues whether malicious or if you are simply looking for third party transparency for the security state of your network.

- Data Recovery
- Computer Forensics
- Network Security and Audits
- Network Incident Response
- Wireless Security and Audits
